

## Terminal Operator Information Return – Exceptions Code List Version 3 - 2008

**Error output Format:** Error Number, Schedule, Product, Doc Number, Field Name and error value.

1. Error Number - Unique number identifying exception.
  - Messages prefixed with “EXX” represent errors. Errors must be fixed before the Department can process your file.
  - Messages prefixed with “WXX” represent warnings. Warnings can be corrected up until the due date of the return. Warnings will not inhibit the Department from processing your file. Upon notification, the Department may convert warnings to errors.
2. Schedule – Receipt or disbursement schedule where error or warning is located.
3. Product – Product type associated with error or warning.
4. Doc Number – Identifying number posted in column 8 (schedule of receipts) or column 9 (schedule of disbursement) of your return. Doc Number identifies the line where the error or warning is located.
5. Field Name - Schedule header information where the error or warning is located.
6. Error Value – Schedule detail creating error or warning.

**Example: Error Message – Not an active Terminal Operator License Number (Return Header)**

**Field Name - Supplier’s FEIN**  
**Error Value - “651234567”**

### **Example of Errors Handled by EDI Translator**

- **Data Format:** Translator will accept any 15 digit string of numbers.
  - **Gallons** – SAP allows 11 digits.
- **Date Format:** Must be CCYYMMDD... Century”20” Year”07” Month “08” Day “05”
  - **Will reject if not a valid date string**
- **Document Format:** Must be 1-15 Alphanumeric.....won’t allow invalid characters.
  - **Will reject if reserved EDI element separator and segment terminator characters are present within the body of the return data. Example.....”~” and “\”. Taxpayer may specify different reserved characters by mutual agreement with BSWA.**
